Backloop Guest Access to manage sponsored WIFI Guest access

WHY?

Dealing with the installation of wireless networks in SMB and enterprises, we have noticed the need for our customers to enrich the functions of corporate internet access, in particular to the corporate guest network.

ISSUE

Customers increasingly need easy control of the corporate network. The guest network is usually separate from the corporate network and can be accessed via a password or credentials provided to the visitor.

In the first case, this leads to poor access control, while secondly it can be complex to manage the accounts provided.

BACK LOOP

SOLUTION

To access the Guest network with our Sponsored Guest Access solution, the user must receive an approval, which can be managed with a simple click without having to create credentials for guests. This makes the operation **quick and easy**.

BACK LOOP
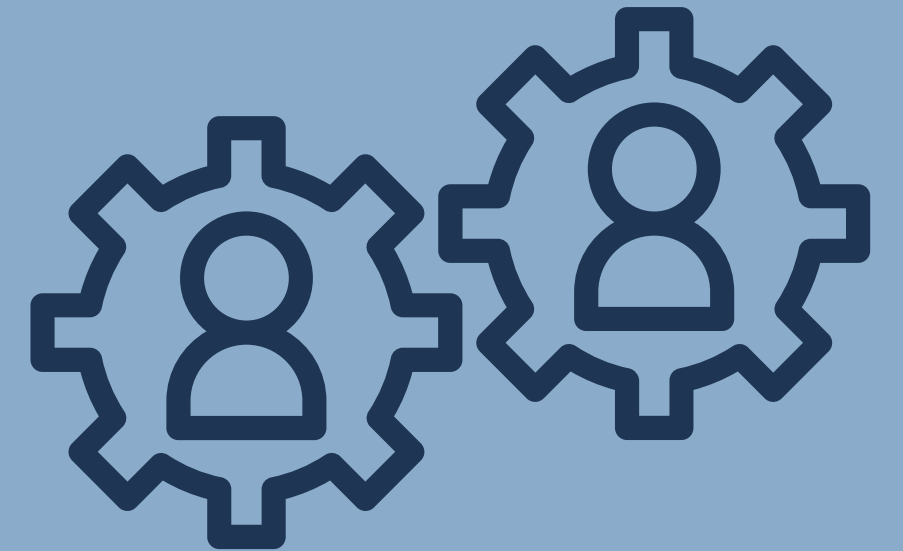

ACCESS MODE

PREDEFINED SPONSOR

Internet access requests are sent to a predefined list of sponsors. Guests make the request by using only their name and email.

ACCESS MODE

DEPARTMENT BASED

Guests will have to select the department from which to ask for Internet access, each department will have a predefined list of sponsors to send requests to.

ACCESS MODE

GUEST SELECTED

Guests must know the email of the internal sponsor; requests are validated through a whitelist managed by the portal.

PROS

- The company is always aware of who has connected to the Guest network
- the Guest network is quick and easy to use with no need to create specific accounts
- Possibility of reporting and controlling of the use of data traffic
